

Amendments to the Specification

Please revise the two full paragraphs on page 11 as follows:

Application server 16 may also take any of a variety of forms. For instance, application server 16 might be a computer ~~programmed~~ that is programmed to perform a service in response to an incoming signaling message and that is further programmed to obtain data made available by enhanced proxy server 14 and to use that data to facilitate performance of the service in response to the signaling message.

The particular service (or services) carried out by application server 16 can also take any of a variety of forms. Continuing with the examples introduced above, for instance, the service might be setting up and facilitating a group communication session, such as a PTT session, or it might be to multicast a message, such as an instant message, or it might be to prompt for and record a voice mail message. Many other service examples are possible as well or will be developed in the future. So these three examples should in no way be viewed as representing the only possible services or types of services that could be carried out by the application server.
